About This Software

JugiPaint is a painting software with diverse tools for various illustration works. It provides many standard digital painting features like layers, brushes, selections, transformations, etc., as well as some less often like guide layers and panels. The raster based painting and editing capabilities are supplemented with powerful tools for creating vector based line art.

JugiPaint is the successor of Comicado and is also well suited for creating comics.

Key features:

- a versatile brush system which powers a wide range of brushes with a high level of customization
- vector drawing
- filter layers
- text layers
- guide layers - perspective and simple mannequin
- layered panels for comics creation
- rulers

For me, Star Nomad is an underrated little gem! It takes all the things that make the 2D action/shooter genre great, and condenses them into a simple yet crazy fun experience. You can make your fortune as a miner, trader or even a pirate (Be warned, betraying everyone doesn't end well :P), but cracking on with the story was the most fun for me. Took me around 30 hours to beat it, which considering the price, is a bargain...

Dont let the simple nature of this game fool you, it becomes very challenging as you progress. Early game is all about earning credits and upgrading your ship. Late game is much more about tactical piloting and loadout (and spamming the X key). Some battles might seem too difficult, but keep at it. Theres nothing more satisfying than battling through a dozen battleships with a lone frigate.

Though this game might not be for everyone, if you're into retro style 2D space shooters with simple mechanics, and are willing to rise up to the challenge of restoring peace to the universe (or not), then pick it up and give it a go. I did and I thoroughly enjoyed it.

Now to uncover the myth of the nude key combo.... VAC = Valve Allow Cheating. It's pretty 'cheaty' but more abilities is more fun :D *_*. This is Really NICE GAME (y). does not work with Windows mixed reality headsets due to out dated version of unrela engine. mindless game. Oh the memory's :). It completly broke my game. now i cant see any of my troops. if any one can tell me how to fix this then plz do then ill up th rating but till then 0/10.

Inaccurate controls and full of bugs.. Some say this Arcania expansion can be played in three hours. It took me nine and a half hours.

It's a completely worthy successor to Arcania and does add to the game. It's as well made as the main game and just as much fun. I liked being able to complete the skills upgrades I had left slightly unfinished from the first game. Good game.

I hope they make another Arcania whole new game follow on, with the same character, and same game developer. I want to revisit this world with updated graphics. I love it.. A pretty cool multiplayer game... but the multiplayer is completely and utterly dead. And now the game is basically forgotten.

RIP.. waiting for horizon starport and warp sector 320kbps CD quality songs. Very fun game so far.

One bug that has been plaguing me has been uncompletable missions. I would also like to see about 100 more modules in the game. But I am sure that will come.. Hexcells is probably still the high water mark but this is more great stuff.

If you enjoyed his other work then you'll enjoy this.

Mobile versions please!
